In regards to: Transderm Ionto System

Saratoga Aesthetics  
204 Chapelwood Drive  
Columbia, SC 29229

Dear Sir or Madam:

Our Transderm System has definitely improved patient satisfaction and increased revenue in our practice. This is especially during the summer months when mesotherapy is typically not performed due to its common side effects of pain, bruising, swelling and hyperpigmentation.

Ever since we purchased Transderm, we were able to advertise for mesotherapy all year round, especially during the spring and summer months to get their bodies "bikini-ready".

Our patients describe the treatments to be relaxing and pain-free, with visible results after 1-4 treatments. The typical result would be that their clothes fit better, with loss of 1-3 inches on average after 4 sessions, as well as visibly reduced dimpling noted by the patients. Our mesotherapy is now 100% needle-free. No patient has ever asked to get mesotherapy with needles. We are now able to delegate mesotherapy to our estheticians.

The support from Saratoga Aesthetics is outstanding. They consistently respond quickly to our concerns.

Best regards,  
Michael LaCap, M.D.
